

Solve each problem.

1) $\frac{2}{4} - \frac{1}{3} =$

2) $\frac{3}{5} + \frac{2}{7} =$

3) $\frac{3}{6} - \frac{2}{8} =$

4) $\frac{1}{2} + \frac{1}{9} =$

5) $\frac{3}{9} - \frac{2}{8} =$

6) $\frac{3}{4} + \frac{6}{9} =$

7) $\frac{2}{3} - \frac{1}{2} =$

8) $\frac{4}{8} + \frac{1}{4} =$

9) $\frac{7}{10} - \frac{1}{2} =$

10) $\frac{4}{5} + \frac{1}{10} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{2}{4} - \frac{1}{3} = \frac{6}{12} - \frac{4}{12} = \frac{2}{12}$

2) $\frac{3}{5} + \frac{2}{7} = \frac{21}{35} + \frac{10}{35} = \frac{31}{35}$

3) $\frac{3}{6} - \frac{2}{8} = \frac{12}{24} - \frac{6}{24} = \frac{6}{24}$

4) $\frac{1}{2} + \frac{1}{9} = \frac{9}{18} + \frac{2}{18} = \frac{11}{18}$

5) $\frac{3}{9} - \frac{2}{8} = \frac{24}{72} - \frac{18}{72} = \frac{6}{72}$

6) $\frac{3}{4} + \frac{6}{9} = \frac{27}{36} + \frac{24}{36} = 1\frac{15}{36}$

7) $\frac{2}{3} - \frac{1}{2} = \frac{4}{6} - \frac{3}{6} = \frac{1}{6}$

8) $\frac{4}{8} + \frac{1}{4} = \frac{4}{8} + \frac{2}{8} = \frac{6}{8}$

9) $\frac{7}{10} - \frac{1}{2} = \frac{7}{10} - \frac{5}{10} = \frac{2}{10}$

10) $\frac{4}{5} + \frac{1}{10} = \frac{8}{10} + \frac{1}{10} = \frac{9}{10}$

Answers

1. $\frac{2}{12}$

2. $\frac{31}{35}$

3. $\frac{6}{24}$

4. $\frac{11}{18}$

5. $\frac{6}{72}$

6. $1\frac{15}{36}$

7. $\frac{1}{6}$

8. $\frac{6}{8}$

9. $\frac{2}{10}$

10. $\frac{9}{10}$
