

Solve each problem.

Answers

- 1) April's discount flowers was having a sale where each rose was six dollars. If April started with seven roses and had five roses left, how much money did she earn?
- 2) At a restaurant each adult meal costs \$9 and kids eat free. If a group of thirteen people came in and six were kids, how much would it cost for the group to eat?
- 3) Emily baked three brownies, but needed eleven total for her party. If she used five spoonfuls of flour on each one, how much cups of flour does she still need?
- 4) A chef needs eight potatoes for a meal. He has already cooked three. If each potato takes three minutes to cook, how long will it take him to cook the rest?
- 5) George had fifteen video games but seven of them weren't working. If he wanted to sell the working games for \$7 each, how much money could he earn?
- 6) Sam had eight action figures, but needed twelve total for a complete collection. If each one costs \$5, how much money would he need to finish his collection?
- 7) In a video game, each enemy defeated gives you five points. If a level has thirteen enemies total and you destroy all but nine of them, how many points would you earn?
- 8) A worksheet had nine problems on it. If a teacher had thirteen worksheets to grade and had already graded four of them, how many more problems does she have to grade?
- 9) There were six friends playing a video game online when four players quit. If each player left had six lives, how many lives did they have total?
- 10) Each chocolate bar in a box cost \$3. If a box had seventeen bars total and Maria sold all but nine bars, how much money would she have made?
