## Solve each problem.

Answers
Ex) Every dollar is 10 dimes. This can be expressed using the equation $\mathrm{y} \times 10=\mathrm{Z}$, where y is equal to the number of dollars and Z is equal to the total number of dimes. Using this equation find the total dimes in 7 dollars.

1) Every yard is 3 feet. This can be expressed using the equation $y \times 3=Z$, where $y$ is equal to the number of yards and Z is equal to the total number of feet. Using this equation find the total feet in 7 yards.
2) Every quarter is 5 nickels. This can be expressed using the equation $y \times 5=\mathrm{Z}$, where y is equal to the number of quarters and Z is equal to the total number of nickels. Using this equation find the total nickels in 7 quarters.
3) Every quarter is 25 pennies. This can be expressed using the equation $\mathrm{y} \times 25=\mathrm{Z}$, where y is equal to the number of quarters and Z is equal to the total number of pennies. Using this equation find the total pennies in 6 quarters.
4) Every meter is 100 centimeters. This can be expressed using the equation $y \times 100=Z$, where y is equal to the number of meters and Z is equal to the total number of centimeters. Using this equation find the total centimeters in 2 meters.
5) Every kilometer is 1,000 meters. This can be expressed using the equation $\mathrm{y} \times 1,000=\mathrm{Z}$, where y is equal to the number of kilometers and Z is equal to the total number of meters. Using this equation find the total meters in 6 kilometers.
6) Every quart is 2 pints. This can be expressed using the equation $y \times 2=Z$, where $y$ is equal to the number of quarts and Z is equal to the total number of pints. Using this equation find the total pints in 2 quarts.
7) Every centimeter is 10 millimeters. This can be expressed using the equation $\mathrm{y} \times 10=\mathrm{Z}$, where $y$ is equal to the number of centimeters and $Z$ is equal to the total number of millimeters. Using this equation find the total millimeters in 2 centimeters.
8) Every foot is 12 inches. This can be expressed using the equation $\mathrm{y} \times 12=\mathrm{Z}$, where y is equal to the number of feet and Z is equal to the total number of inches. Using this equation find the total inches in 7 feet.
9) Every liter is 1,000 milliliters. This can be expressed using the equation $\mathrm{y} \times 1,000=\mathrm{Z}$, where y is equal to the number of liters and Z is equal to the total number of milliliters. Using this equation find the total milliliters in 5 liters.
10) For each kilogram there are 1,000 grams. This can be expressed using the equation $y \times$ $1,000=\mathrm{Z}$, where y is equal to the number of kilogram and Z is equal to the total number of grams. Using this equation find the total grams in 8 kilograms.
11) Every dollar is 4 quarters. This can be expressed using the equation $y \times 4=Z$, where $y$ is equal to the number of dollars and Z is equal to the total number of quarters. Using this equation find the total quarters in 5 dollars.
12) Every pint is 2 cups. This can be expressed using the equation $y \times 2=Z$, where $y$ is equal to the number of pints and Z is equal to the total number of cups. Using this equation find the total cups in 10 pints.
